

Assembly instruction for stabilizer

Remove the barreled action from the stock.

Remove the cap.

Loosen the pin.

Unscrew with a screw driver or a coin and remove it completely.

Open the action carefully.

Stabilizer with sleeve and pins.

Remove pins from the sleeve. The pins are not needed anymore.

Hold the lever and at the same time push the stabilizer with the sleeve into the housing from behind.

Push the stabilizer completely into the housing with the help of the sleeve.

Remove the sleeve from the stabilizer. The sleeve is not needed anymore.

Pull the trigger blade backwards and hold it tight. At the same time close the action.

Screw in the screw with a screw driver or a coin.

Open the action, hold it under tension and screw it out counter-clockwise with the help of a coin until the trigger is cocked (you hear a click).

From the position screw it out for another 1/4 turn.

Tighten the pin.

Close the action and actuate the trigger.
